

Cut Injury Safety Module

Some organisations will have specific risks of cuts and lacerations. This can result from handling blades, knives, saws etc., or from handling sharp materials such as glass, sheetmetal or even paper!

Cut-resistant gloves are commonly used, and by encouraging the use of Glove Clips, the workplace supervisor can be confident that gloves are available when required.

Other safety items may be required for each department's specific risks. Take advantage of our safety assessment offer and then store the extra contents you purchase in the Safety Space™ drawers.

Module contents:

- 4 x pairs Cut-resistant gloves
- 4 x Glove Clips – different colours
