

Dangerous Goods Safety Module

All organisations have chemicals on site, and many of these chemicals come under Dangerous Goods and/or Hazardous Chemical legislation.

This module is intended for those workplaces or departments with limited chemical storage or where larger spill kits are some distance away. It provides the necessary equipment required to immediately segregate an area (floor signs and barrier tapes) prior to an emergency response team cleaning up the spill.

A company or department must assess the chemicals to be stored on site and/or used in the area and take appropriate action for their control.

The 20-litre spill kit is a single-use kit for small spills. Talk with our safety consultant who will assess your company's additional individual requirements.

Visit us at www.unlimitedspaces.com.au for more information.
