

Eye Injury Safety Module

Many workplaces have eye protection available, but eye injuries may still happen. This module provides a portable kit to help when such injuries occur.

The Equipoise magnifying lamp is a valuable tool for the First Aider when administering to eye injuries.

Each business must conduct a first aid risk assessment to decide on the most appropriate first aid supplies (and trained personnel) for the most likely injuries that may occur in that area. See our safety consultant who can advise on further safety supplies that may be required.

Module Contents:

- Equipoise lamp with magnifier glass
- Portable Eye Wash Station Kit

Eye Wash Station Kit contents	Qty
