

Lockout/Tagout Safety Module

Organisations using plant and machinery must have isolation procedures and equipment to minimise the risk of injury during inspection, repair, maintenance or cleaning activities.

This Lockout/Tagout Safety Module represents a starting point to help effectively lock and tag plant and machinery or it could supplement existing systems. For example, padlocks for production personnel to isolate equipment if maintenance staff are unavailable.

There is a wide range of equipment available and a safety consultant can help you decide what is best suited to your needs. Additional acrylic holders may be purchased individually.

Module contents:

- **4 x padlocks** – coloured and keyed differently
- **1 x 38mm hasp and 1 x 25mm hasp.** Each hasp accepts up to six padlocks of 9mm shackle diameter
- **1 x 6-bay acrylic holder** - for padlocks and hasps
- **25 x Polyester “Danger” tags**
- **25 x Nylon ties**
- **1 x acrylic Tag/Tie holder**
- **1 x  magnet**
- **Code of Practice for Plant (#19)**

This publication has been provided by WorkSafe Victoria free of charge.

Note: Both the Lockout/Tagout padlock holder and the Tag/Tie holder are factory-fitted prior to delivery
