

Warehouse Safety Module

Warehouse Supervisors are often challenged when ensuring people on site are correctly wearing the appropriate Personal Protective Equipment (PPE). Warehouses are often large areas with few personnel and may be isolated from staff facilities.

A Safety Space™, together with the Warehouse Safety Module, located where it is needed most, can help ensure PPE, company procedures and MSDS are on-hand when required.

Each company or department must assess the risks associated with warehouse traffic, chemicals and duties. Ask our safety consultant who can advise on further safety supplies that may be required.

Module contents:
